

Eagle Mountain – Saginaw High School #3

Chisholm Trail High School in Eagle Mountain-Saginaw ISD is a state-of-the-art high school with a green technology Geothermal HVAC system. As an accredited International Ground Source Heat Pump Association (IGSHPA) Installer, SKIHI has installed over 260 ground-source heat pumps connected to nearly 1,400 geothermal wells at the new campus. Instead of bulky, loud condenser units, the high school utilizes these underground geothermal well fields to reject and reclaim the heat for the HVAC system. This not only saves the district space on the campus, but also saves taxpayer money in electricity costs for the school.
